

Orders and Payments PRD - demo-bank

Sample PRD bundled with the agent test fixtures - SPEC T9. Each section below is an independently verifiable behavior; drafted cases reference their section via `source_prd_ref`.

Section: Order list [anchor:order-list]

The dashboard shows the recent orders of the user in a table with the columns id, amount and status. Every rendered row must match exactly one record from `GET /api/orders`; the UI must never invent or drop orders.

Section: Order cancellation [anchor:cancel]

From the order detail view the user can cancel a pending order. After cancellation `POST /api/orders/cancel` and the order detail view must both report status cancelled.

Section: Balance display [anchor:balance]

The dashboard balance card renders `GET /api/balance` with exactly two decimal places and a currency code, default USD.
